

PHX-200

HIGH PRESSURE DRY ICE CLEANING SYSTEM

The Safe, Clean, Effective High Pressure Dry Ice Blasting Solution

The Phoenix PHX-200 delivers powerful, high pressure dry ice blasting capabilities in a mobile, economical, highly efficient unit.

-  **Reinforced stainless steel construction with high-capacity dry ice pellet hopper**
-  **Powerful, reliable airlock provides effective cleaning at higher pressures up to 250 PSI**
-  **All pneumatic, single-hose design for superior performance and flexibility**
-  **Capable of blasting pellet and granule media at a fraction of the cost of granule only machines**
-  **Adjustable blast pressure and ice rates offer enhanced performance over a wide range of applications**
-  **Built-in separator/filter provides added protection of the pneumatic controls and helps clean the blast air**

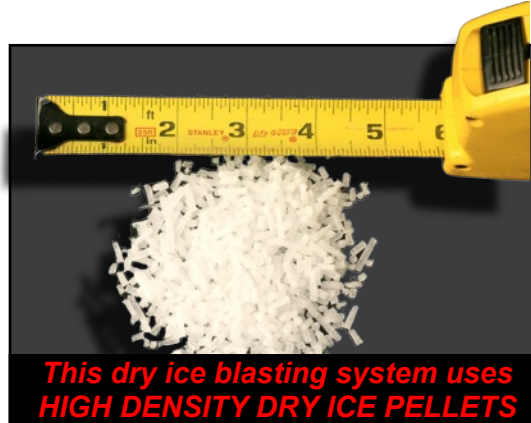

DRY ICE CLEANING EQUIPMENT IS ENVIRONMENTALLY FRIENDLY

Most dry ice is made from recaptured or reclaimed carbon dioxide being emitted by industrial processes.

Dry ice cleaning reduces and in some cases eliminates the need for hazardous cleaning chemicals.

The dry ice particles disappear on impact resulting in significant reductions in the amount of hazardous waste being generated.

This dry ice blasting system uses HIGH DENSITY DRY ICE PELLETS
